

Product Overview idWorx!

The Complete Software Solution for Department of Defense Mandates on UID, RFID and WAWF.

InfinID's software suite idWorx! is a completely integrated .NET solution for all RFID and UID DoD mandates, including automated electronic WAWF and UID registry submission. idWorx! provides a cost effective "out-of-the-box" solution to mandate compliance without the need for expensive middleware or professional services. idWorx! is intuitive, powerful, complete, and modular.

idWorx! allows you to start with a completely stand-alone workstation using only the modules you need. Then, as your company's experience with UID and RFID grows, seamlessly migrate to multiple work-stations communicating with a shared database on a centralized server, and full ERP back-end systems integration.

Intuitive

idWorx! is intuitive and easy to use.

Segmented Administrator/Operator functionality offers complete control for administrators, while maintaining a streamlined workflow for operators. This allows many different users within the enterprise to collaborate effectively at all stages of the UID and RFID marking and labeling process.

- ★ Control passes seamlessly between contract administrators, production managers, manufacturing personnel and shipping personnel.
- ★ A familiar windows-style user interface in both operator and administrator modes, with many helpful wizards, makes operation easy.
- ★ User-friendly touch screens provide an easy intuitive interface for warehouse and manufacturing personnel.
- ★ Predefined workflows for each mandate ensures that operators accurately follow all steps.
- ★ Keyboard and manual data entry is minimized by the intelligent use of existing shipping label or product barcodes which are analyzed by the integrated barcode scanner.

Powerful

idWorx! has powerful enterprise ready features!

All data is stored in Microsoft SQL Server, an enterprise class relational database. Powerful wizards for intelligent serial numbering, and RF product analysis are included. Full reports are available and exportable in Excel, Word, and PDF. Custom reports can be easily developed using Crystal Reports.

- ★ Integrated role-based security model.
- ★ Access to authorized users only with full user auditing of all operations.

- ★ Full administrator access to all data.
- ★ Integration with existing WMS, ERP, or accounting systems can be accomplished using a variety of techniques such as: ODBC, JDBC, ADO, or InfinID's .NET API and XML Export Utility. idWorx! features a state-of-the-art .NET architecture running on Windows XP Professional, with deep support for ERP XML integration.

Complete

idWorx! is a complete comprehensive "Workflow Oriented" solution to UID labeling and RFID tagging for both suppliers and distributors.

- ★ Full verification of RFID tag and UID label readability.
- ★ Integrated UID verification with ISO reports to MIL-130
- ★ Complete .NET API for programmatic access is included in all versions of idWorx!

Full maintenance, support, training, and upgrade options are available. The idWorx! professional installation team will have you in compliance with your mandates in as little as two days. idWorx! customers are currently labeling and automatically submitting thousands of UIDs and RFIDs to WAWF and the UID registry.

Modular

idWorx! is also modular!

Choose only the modules you need for your application, and add modules as new mandates come into effect.

For example, start with the UID module only, and add the fully integrated RFID module later. idWorx! is seamlessly scalable from a single user to an enterprise wide installation. Start small with a completely stand-alone single user system for minimal disruption, and progress to a multiple-concurrent user license as you become more familiar with mandate operations. The enterprise version of idWorx! allows multiple concurrent client users to simultaneously access the idWorx! database which can be hosted in your company's IT server room.
