

# idWorx! UID Product Comparison

InfinID offers an array of product suites, one of which will be perfect for your needs.

## **idWorx! UID Standard Edition**

The idWorx! UID Standard Edition is designed for the company that wants to start by getting up and running with the DoD mandates as simply as possible and at the lowest cost. Utilize all of the workflows used for activities such as creating UIDs, verifying UIDs, and associating UIDs to shipments. UID Standard Edition provides standardized printing templates and printing devices, allowing for a much simpler setup process. Although submission of shipment and UID data is limited to a web browser interface, the idWorx! reporting tools allow for effective communication between departments on what data needs to be entered. No more fumbling with spreadsheets and paper hardcopies to find out which UIDs were sent out with which shipment. You can install UID Standard Edition on as many computers as needed, but only one person is allowed to be logged in at a time.

## **idWorx! UID Extended Edition**

The idWorx! UID Extended Edition is ideal for the company that is just starting out with the mandates. UID Extended Edition provides all of the UID capabilities required by the DoD such as creating UIDs, verifying UIDs, adding UIDs to shipments, and submitting UIDs electronically to WAWF and the UID Registry. Print your UIDs using your choice of devices such as label, laser, or dot peen. UID Extended Edition is designed to be hardware agnostic, giving you the choice over what hardware you use to print, scan, and verify your UIDs. You can install UID Extended Edition on as many computers as needed, but only one person is allowed to be logged in at a time. UID Extended Edition is a great choice for beginners in the DoD mandates arena.

## **idWorx! UID Enterprise Edition**

idWorx! UID Enterprise Edition provides the most flexible package to high-end customers. It provides all of the flexibility that the Extended Edition does, such as creating UIDs, verifying them, associating them to shipments, and submitting electronically to WAWF and the UID Registry. In addition to this, UID Enterprise Edition also lets you decide how many concurrent users you need. This is especially critical for high volume manufacturers that need to have multiple departments working with idWorx! at the same time. You can start out with the 5-pack and as the business demand grows, you can increase idWorx! capabilities along the way. Adding additional users is easy through our web-based licensing system..
